USER INTERFACE AND DESIGN

COMPARISON OF UI DESIGN BETWEEN TWO FIGMA CREATION

BAD WEBSITE:

GOOD WEBSITE:

PROTOTYPE LINK: [Bad/Good UI – Figma](#)

The two apps have distinct designs and approaches. Here's a comparison:

BAD WEBSITE (BobaBoom)

1. Design Style:

- o Uses too many bold and contrasting colors (red, purple, green) without harmony.

- o Visual clutter due to crowded elements and inconsistent spacing.
- o Icons, illustrations, and text styles do not follow a single design system.

2. Content:

- o Displays multiple drink options at once, making it visually overwhelming.
- o Text labels are small and hard to scan quickly.
- o Order details are cramped and compete with product visuals.

3. Navigation:

- o Navigation icons are present but not clearly distinguished or intuitive.
- o Search and filter options are placed awkwardly and feel disconnected from the main content.

4. Purpose:

- o Intended for ordering bubble tea, but poor hierarchy makes decision-making difficult.

GOOD WEBSITE (BobaBlast)

1. Design Style:

- o Soft, pastel color palette with consistent tones throughout the app.
- o Clean and balanced layout with proper spacing between elements.
- o Playful illustrations that match the overall theme and enhance visual appeal.

2. Content:

- o Drink options are clearly displayed with enough space to focus on each item.

- o Order summary is highlighted in a dedicated section, improving readability.
- o Prices and add-ons are easy to understand at a glance.

3. Navigation:

- o Bottom navigation bar is clear, accessible, and visually consistent.
- o Search bar is prominently placed, improving usability and flow.

4. Purpose:

- o Designed to create a smooth and enjoyable ordering experience while maintaining aesthetic appeal.

Key Differences:

- Focus: The bad UI tries to show everything at once, while the good UI prioritizes clarity and flow.
- Design Aesthetics: The bad UI feels cluttered and chaotic; the good UI feels calm and cohesive.
- Content Hierarchy: The good UI clearly separates browsing from ordering, unlike the bad UI.
- User Experience: The bad UI may confuse users, while the good UI guides them naturally through selection and checkout.
